

## Day - 7

→ Related Goods:

Eg: Fountain Pen, Ball point Pen.

→ Complement goods:

For related goods, price of decline of one good leads to decline of other (or vice versa), this is called cross substitute.

→ Producer sets price based on market behaviour, not what customers are willing to pay.

$$\text{Profit} = P \cdot Q - C(Q)$$

price  $\swarrow$   $\searrow$  Technology

$$C(Q) = wL + rK + H + \text{Retained Profit}$$

$\searrow$  Rent

$$\pi_{\max} = PQ - (wL + rK + H)$$

→ Supply curve:

shifts to the right when—

- Production cost ↓
- Technology improves
